

Green your Home - Green Your Home Loan with **Aussie**

Did you know that you can save \$\$\$\$Thousands in interest on your home loan using the power of the sun?

Many people want to be more environmentally friendly and reduce their carbon footprint but decide not to for economic reasons. The Federal governments failed "Green Loans" was designed to address this, but unfortunately never got off the ground. Aussie has a solution to help.

The concept is simple. Take 1 step backwards to take 3 steps forward. Here's a brief overview.

Refinance your home loan to a better deal with Aussie.

Borrow some extra funds to install PV Solar on your home

Use the money saved from your electricity account to make extra payments on your home loan

This will smash your home loan and save you \$\$\$\$Thousands in interest.

Whilst the Governments "Green Loans" was a great idea it still had a couple of problems, like home green audits and 4 year loans.

Aussie's proposal is better because.....

No Need for an audit of your home

Complete flexibility of what upgrades you do and what companies you use

Get a better deal on your entire loan

Use the savings to SMASH your home loan and save years off the life of your loan.

(our figures show a saving of 10years off an average loan)

If you could spend \$20,000 and save \$120,000 whilst at the same time reducing your carbon output, would that interest you?

Talk to **Aussie Paddington or Lutwyche** to find out more and how this could work for you and let **Aussie** put you in a better place.

Our business is built on referrals

Please don't keep us a secret!
