## Out of hours signage installation- Hale Street, Kelvin Grove

### INFORMATION NOTICE

December 2011

From **Monday 19 December 2011**, Transcity will be installing signage at night on Hale Street.

Installation will take place on the eastbound lane of the ICB, between Caxton Street and Musgrave Road.

It is expected that these works will occur from **8.00pm to 5.00am over two separate nights between Monday 19 December and Friday 23 December 2011**. As this work requires a lane closure on Hale Street, it needs to be undertaken at night to reduce traffic impacts.

#### What to expect:

- Partial lane closures around the work area
- Vehicles and equipment with flashing lights and white noise reversing beepers for the safety of onsite workers
- Use of traffic control vehicles, vacuum excavator, concrete trucks and elevated work platforms.

Directional signage and traffic control officers will be in place to direct motorists as required.

This work may be postponed due to wet weather and unforeseen circumstances and additional night work may be required.

Thank you for your cooperation and patience during these important works.

#### Why does this work need to occur at night?

Throughout the construction of Legacy Way, Transcity will do the majority of surface works during day shifts. However, for safety reasons and to reduce the impact on local and peak hour traffic, some work will need to be carried out at night.

#### Our project

Legacy Way is a 4.6km road tunnel that will connect the Western Freeway at Toowong with the ICB at Kelvin Grove. It will provide an alternative route to local roads for traffic leaving the Western Freeway and travelling to and from the ICB. When it opens, Legacy Way will reduce, by up to 44%, the peak hour travel time of journeys from the Centenary Bridge to the ICB.

If you would like more information about the construction of Legacy Way, please contact the Transcity Community and Stakeholder Relations Team via:
